By removing fine debris from your lineofsight, our small air blower is great for detailed projects, sanding, engraving, and carving.The removable cushioned jaws help protect delicate work pieces while providing a firm, steady grip.This holder turns your Dremel rotary tool into a stationary sander, grinder or polisher, and the removable jaws create a standalone bar clamp on the Dremel 250001.The removable cushioned jaws on the Dremel 250001 help protect delicate work pieces while providing a firm, steady grip.To calculate the overall star rating and percentage breakdown by star, we don't use a simple average. Instead, our system considers things like how recent a review is and if the reviewer bought the item on Amazon. It also analyzes reviews to verify trustworthiness. Please try again later. Minnesota Mike 5.0 out of 5 stars I was looking for another clamp type tool to hold some small wood pieces I was burning and sealing, as well as use on leather and other small jobs. I saw this unit from Dremel and had to give it a try. For about 25 bucks, this tool really does a lot. Its like having an extra set of hands. I clamped it to my home made work bench and first used it to hold a piece of leather where I was burnishing the edges. Worked like a champ. It clamped the rawhide firmly enough that it never slipped. Next, i used it to hold some trim pieces of wood I was sealing with laquer. Again, worked perfect for this. I used the vise to hold the screw driver and took an angle grinder to that and made the tool. The vise held the screwdriver without slipping and saved me from going to my shop to use the big vise. Keep in mind that if you had to work some steel or wanted to pound out nails from wood, this is not the tool for that job. It is however extremely handy for smaller jobs and even comes with an attachment device for your Dremel or other rotary tool.

Lastly, I write reviews like this to try and help others make informed decisions, just like I do when I'm buying. <http://www.bajda.bielsko.pl/userfiles/country-comfort-wood-stove-manual.xml>

I hope you found my review helpful and if so, please click the yes button below. Thanks! You can quickly change out the bar clamp for the Dremel holder. It has a nice ball pivot for the head of this vise. The bar clamp is similar to woodworking clamps, where you slide them closed onto your object, and tighten the handle to compress even more for better grip. The Dremel rotary tool holder fits all Dremels, and it also fits the Milwaukee M12 rotary tool as seen below. Now this is an easy way to mount your rotary tool, while you hold your project in your hands. Sometimes it's easy to work on your project in this manner. I would definitely purchase this again. Just wished I purchased this sooner! It's not quite as rigid as an all-steel vise, but it is not that heavy either. It's made of some metal, some high quality plastic. Should have bought this years ago. I needed something to not only hold but raise up my projects to a level I wouldn't be hurting my neck and back bending over too far for extended periods. This does the job. Although it is mainly all plastic it appears to be strong ABS and the middle section metal. The table grip is strong. The vise grips are very adjustable and have solid ribbed rubber pads. You place your project edges in the grooves which help keep it still while working material. The middle section also can tilt and rotate to different angles. Once you obtain the angle you need, you use that blue ridged ring to tighten and keep it still. Overall so far so good. I'm so far impressed with Dremel quality drills and accessories. See photos. I definitely recommend. It's much bigger and way more maneuverable than either of the two vices I use in combination to get half of the positions I can get with this one. Plus the ability to add my rotary device and maneuver and position that as well. The table clamp covers a lot of surface area and can be used on corners or rounded areas very securely because of this.

On my first attempt though I did tighten the rotary ball a bit too much and needed a strap wrench to loosen it. But lesson learned, and I equate it to user error. But that just shows you how solid this thing can be if you want it. Very happy with this purchase. Thank you Dremel for a great product! I use it for lightweight maintenance and repairs on firearms pistols. It is non-marring, both on the item being held, and on the mount to the table. It has a fine level of pressure adjustment, large jaws, and can hold items at any angle. The uneven surface of the ball makes moving the vice sporadic and one lock setting doesn't work with just a little movement. I like the fact that you can attach a rotary tool. I do not like that the rubber stop on the end of the bar falls off. I do not like that you can only tighten the vice if the one jaw attached to the pipe is all the way against the socket. This means you have a huge piece of bar sticking off of the work area instead of being able to center the mass over the ball if it is large, etc. You also have very little room to actually tighten the vice. The majority has to be done by pushing it closed which can sometimes take a bit of force to get started, other times it moves when you don't want it to. I do like the replaceable jaw pads, but it only comes with one set. No flat jaws are included. Even the jaws underneath are shaped the same. Major product defect the inside of the ball is corroded really badly. Trying to contact the seller on Amazon is difficult because I only want that part replaced without having to receive an entire new product and go through the entire wait protocol. Sin duda es muy llamativo, parece un tornillo de banco pero es una herramienta de trabajo, de ligero a muy ligero. No sirve para detener un clavo o rondana para realizar un corte o devastar, se sueltan. Las placas se doblan si aplicas algo de fuerza y mucho mas si aprietas el tornillo de mango azul.

<http://seasailing.us/node/3234>

Tampoco sirve para detener un pedazo de madera medianito y cortarlo. Pienso que puede servir para algo delicado como joyeria o modelismo pero no para electronica ni carpinteria ligera. The 3D axis makes it plenty useful in many occasions. I like the attachment option to hook the rotary tool on. Did not try it yet tho, using the workstation for these things, but you may have even more flexibility considering the axis. I do like the micro adjustment handle on the vise. All in all, great product. My

only concern is the longevity of the main clamp. It looks solid but bends a bit if you over tight it. L'Axe 3D le rend utile dans plusieurs occasions. J'aime bien l'option d'attache supplémentaire pour tenir le Dremel en place, mais pas encore essayé, j'utilise le workstation pour ces travaux. Toutefois, le Vise offre un peu plus de flexibilité avec l'Axe 3D. En tout et partout, bon produit. Ma seule inquiétude est au niveau de la longévité de l'attache plastique à la base. Ça semble solide, mais tend à plier un tout petit peu si c'est trop serré. Autrement, parfait! Plastic but versatile Cons Body all made out of plastic only the 360 degree rotating shaft, the vise rod and the bolts are made out of steel When you turn the blue screw to tighten the vise to the table, the plastic body where the the big Dremel logo is is bending and since the body and the screw threads are plastic, you have to be very careful not to over tighten the main blue screw. Because otherwise you will either broke the threads or cracks the body. Dremel doesn't sell spare pads the rectangular blue pads. Great for holding soldering job, but don't expect using it as a vise. I am very happy with it. I can change orientation of my PC board to any orientation I wanted. And the jig is solid. I would recommend to others for using it as a holder when orientation for work piece is important.

After extensive use, I found it is only good for holding soldering electronic boards, All Dremel parts except the thin iron bar, are made of plastic. No precision no strength as a vice. La fuerza que ejerce me parece adecuada para trabajos sencillos porque casi todos los elementos que lo forman son de plástico, de buena calidad pero plástico al fin. Practico el sistema de mordazas, pues con solo deslizarlas sujeta al objeto de trabajo y si se requiere mas fuerza tiene un tornillo que la puede proveer. Otro plus es el mecanismo para cambiar de angulo todo el sistema de mordazas, muy rapido y practico. Allows approaching the workpiece from a comfortable angle. Jaws may be used with base unit or detached for use as a standalone bar clamp. Easily accommodates larger work pieces. Stabilises oversize objects and protect delicate pieces from damage. Allows round and oddshaped objects to be held securely. Allows quick removal of objects from jaws. Resists twisting and bowing for solid stability. Possibility to attach DREMELite. Scope of Delivery Dremel MultiVise Removable softpads Tool holder adapter Downloads Manual Which tools fit which attachments. The real problem is holding both your Dremel and an intricate piece you are working on, getting the angles right, perhaps needing to stabilise your working hand with the other. Running out of hands.

The MultiVise is a more substantial investment as it is an attachment and not just an accessory, but apart from freeing up a hand and adding stability it is good to have the peace of mind that you can attach either your Multitool or project safely. I was particularly concerned about "clamping" my Dremel, but with this you can do it without damage or obstruction of air vents necessary for cooling. The MultiVise ball which allows controlled tilt and rotation can be moved to a fixed position as there is a notch which accepts the rod at the top of it. When you do especially small and intricate work, such as jewelry, this vice is ideal. The fact that you can mount your Dremel for angled work is a bonus. The rubber grips are invaluable when you need to clamp without marring your work piece. Mine is permanently mounted on my work bench and is used almost for every project. If the awesomeness is considered to be home improvement projects, and various DIY projects. HGTV is pretty much on a 24 hour loop in the living room. I will relocate. I have years of experience. I will

frost my hair and shop at Hollister. The carpenters on your shows are jokes. I too can put on a brand new tool belt, bear my tanned, muscular arms snicker, wear expensive designer sunglasses No carpenter wears expensive sunglasses. They break. They aren't ANSI approved, and walk around a project like I know what I'm talking about. After a good wander around the tool section at the Big Orange Box Store, I was Fixated see what I did there. It is part bench vise, and part tool holder. Sounds pretty awesome.

I can see the tool holding function to be a great benefit to hobbyists that have to work in a pretty fine scale on their crafts. For Home Improvement. You can articulate the actual angle of the vise, rotate it 360 degrees, and move the entire vise itself. Plastic does funny things when you light it on fire, accidentally hit it with a sawzall, or car. A stationary, metal bench vise would be better for this. Upside to Dremel's vise is that it comes with rubber type pads that won't mar or scratch your work. Mobility is a great advantage to this. I could see using it as a measuring stop if you were mass cutting something like siding and needed to be mobile. Facebook Pinterest Twitter Cancel reply.
